

# VK 401

Perfect air decontamination for medium rooms and common spaces.

The **VK 401** is a wall-mounted or freestanding unit that is suitable for areas of up to 60 sqm. It creates a laminar airflow that draws contaminated air away from the breathing zone, and replaces it with clean, safe air.

With triple filtration and 8 high power UVC lamps, the **VK 401** contains the same **VIRUSKILLER™** technology found in much larger units designed for medically sensitive spaces - and of course, retains our **single air pass** disinfection and airflow control capabilities.

## USE CASES:

- Laboratories
  - Clinics
  - Staff toilets / Changing areas
  - Offices
- or
- Any room smaller than 60 sqm.
