

# Ergonomics for patients & practitioners.

- **The table version:**  
Even more freedom of motion for an ergonomic work technique in any treatment position
- **The swing-arm version:**  
Better extension lengths and hygienic hose guide. Helps well-balanced handpieces rest perfectly in your hand.
- **The cart version:**  
More mobility combined with simple operation. Just put your cart aside when needed.

The foot control pedal is a further highlight for ergonomic working with KaVo. This is also available as an optional flexible wireless foot control that is operated with comfortable right/left movements. No strenuous up/down movements mean that the leg muscles remain free from tension, including during long seated sessions or standing treatments.

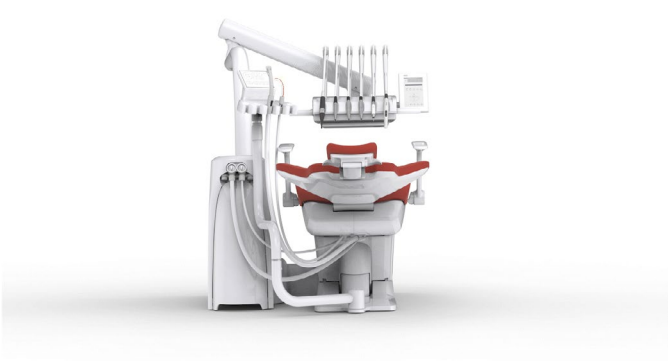

## KaVo uniQa

KaVo uniQa is as flexible as you are individual and ergonomically correct from head to toe. Adjust your uniQa not only to your personal requirements and habits, but also to your height. The height of the patient chair can vary between 350 mm and 830 mm, ensuring optimal ergonomic conditions, regardless of whether you perform treatments while sitting or standing.

The KaVo uniQa is as flexible as you are individual

The patient positioning of the KaVo uniQa according to Trendelenburg is both comfortable and ergonomic in every treatment position: the footrest inclines and rises automatically to match the inclination of the backrest. This combined movement prevents compression or extension of the patient's back while the backrest is being readjusted and the elevated leg position supports circulation. Small differences in the design often make a big difference with daily treatments.

**Left or right? Always correct!**  
The KaVo uniQa stands for individuality and flexibility. So it's only natural that it's available as both a left or right-handed option.

No matter how you decide today, you can always change your mind later. That is investment security à la KaVo.

**A healthy working posture starts with your seat**  
Nothing affects our posture quite as much as the chair we sit on every day. The KaVo PHYSIO Evo work chair was specially designed to meet the requirements of a dental practice and is still the only work chair to have been awarded the coveted AGR e.V. seal of approval for its ergonomic concept.

An ergonomically healthy sitting posture may have a significant influence on the profitability of your practice. Because, in the long term, always working with good posture without any health issues is priceless for you and your staff.
